Shockwave Therapy

Accelerate healing with Shockwave Therapy

What are the benefits of Shockwave Therapy?

- Non-surgical treatment.
- No side effects.
- Accelerates healing.
- Affordable.
- Coverage available from most insurance companies.

There are no side effects with this non surgical treatment and it is available at a reasonable cost. Shockwave treatments are non-invasive and promote accelerated recovery of injured soft tissue, bone, heel and joint pain.

A shockwave is an intense, but very short energy wave travelling faster than the speed of sound. The basic technology involved with extracorporeal shockwave technology has been used for decades on millions of people.

Therapy sessions are short, usually 20-30 minutes in length, and provides **successful relief** of **chronic pain** and **restores mobility** painlessly. Permanent relief typically begins about 72 hours following treatment.

Conditions that can be treated by Shockwave Therapy

- Plantar fasciitis
- Achilles tendinopathy
- Scar tissue
- Tennis elbow
- Jumpers knee
- Calcific Rotator Cuff Tendinitis
